Mutation Testing

Evaluating the quality of a test suite by injecting bugs

Example of mutators:

- change a > condition with <;
- · delete the body of a method.

Mutation Testing

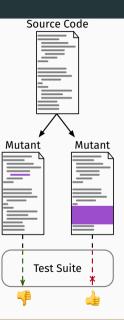

Evaluating the quality of a test suite by injecting bugs

Example of mutators:

- change a > condition with <;
- · delete the body of a method.

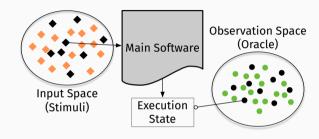

Goal

Enhance test suite by detecting new mutants

DSpot¹

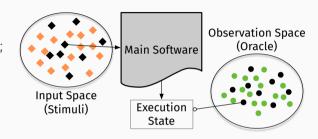

Randomly modifies test cases:

¹https://github.com/STAMP-project/dspot

Randomly modifies test cases:

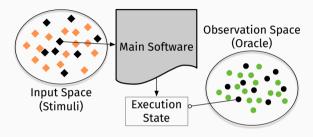

· new inputs to trigger new behaviors;

¹https://github.com/STAMP-project/dspot

Randomly modifies test cases:

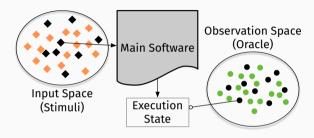

- · new inputs to trigger new behaviors;
- new assertions for unchecked properties;

¹https://github.com/STAMP-project/dspot

Randomly modifies test cases:

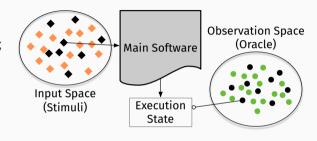

- · new inputs to trigger new behaviors;
- new assertions for unchecked properties;
- · targets regression.

¹https://github.com/STAMP-project/dspot

Randomly modifies test cases:

- \cdot new inputs to trigger new behaviors;
- new assertions for unchecked properties;
- · targets regression.

Example²

```
@Test
   public void immutableGraph() {
      MutableGraph<String> mutableGraph = GraphBuilder.directed().build();
3
      mutableGraph.addNode("A");
      ImmutableGraph<String> immutableGraph = ImmutableGraph.copyOf(mutableGraph);
5
6
      assertThat(immutableGraph).isNotInstanceOf(MutableValueGraph.class);
      assertThat(immutableGraph).isEqualTo(mutableGraph):
8
9
      mutableGraph.addNode("B");
10
      assertThat(immutableGraph).isNotEqualTo(mutableGraph);
11
12
    <sup>2</sup>https://github.com/google/guava/blob/master/guava-
                                                                                    3/11
```

tests/test/com/google/common/graph/ImmutableGraphTest.java#L29-L40

Example of Amplification

mutableGraph.addNode("B"):

@Test

12

13

14

```
public void immutableGraph() {
2
     MutableGraph<String> mutableGraph = GraphBuilder.directed().build();
3
     mutableGraph.addNode("A");
     mutableGraph.addNode("C"):
5
     ImmutableGraph<String> immutableGraph = ImmutableGraph.copyOf(mutableGraph);
6
7
     assertThat(immutableGraph).isNotInstanceOf(MutableValueGraph.class);
8
     assertTrue(immutableGraph.nodes().contains("A"));
9
     assertThat(immutableGraph).isEqualTo(mutableGraph);
10
11
```

4/11

assertThat(immutableGraph).isNotEqualTo(mutableGraph);

Goal

 \rightarrow Human-friendly, high-level, natural language description

Goal

ightarrow Human-friendly, high-level, natural language description

First objective: an explanation per mutant kill.

Identify Relevant Statements

Identify the killing assertion.

Identify Relevant Statements

Identify the killing assertion.

Simple static slicing:

- \cdot starting from the killing assertion;
- · control-flow slicing and
- data-flow slicing.

Identify Relevant Statements

Identify the killing assertion.

Simple static slicing:

- starting from the killing assertion;
- · control-flow slicing and
- · data-flow slicing.

Java slicing tool

T.J. Watson Libraries for Analysis (WALA)³

Established library with active development.

³https://github.com/wala/WALA

Cleaning the Amplifications

1. Remove statements not present in a slice.

Cleaning the Amplifications

- 1. Remove statements not present in a slice.
- 2. Remove statements with no impact. → long process

Related Works Limit

Problem

No "why" information. Paraphrasing the code.

Related Works Limit

Problem

No "why" information. Paraphrasing the code.

Reason for amplifications to exist \rightarrow mutant kill.

Natural Description

Better oracle:

- · what part of the system was left out;
- avoid using terms as mutant.

Natural Description

Better oracle:

- · what part of the system was left out;
- avoid using terms as mutant.

New kind of behaviour:

· differences in traces.

Experiment Protocol

Performances.
